

# YOUR BEST CHOICE FOR INDUSTRIAL CLEANUP

*During the Exxon Valdez cleanup, only one pressure washer manufacturer proved equal to the task.*

Landa SLX: 10 GPM, 2500 PSI, Dual-Gun Ready

In 1989 when the Exxon Valdez spilled 10.8 million gallons of crude oil in the Prince William Sound, Landa proved to be the only pressure washer durable enough to stand up to the harsh conditions experienced during the cleanup. Since then, Landa has continued to be the preferred brand for big industrial cleanup projects.

LANDA, INC. EMPLOYEES

Your product, the SOS10-2000 proved to be the best hot water, high pressure sprayer that Exxon used to clean up Prince William Sound Alaska. I personally, thank all of you at LANDA, INC. for the extra effort I know it took to produce the one hundred (100) sprayers in a very short time. We had, to my knowledge, every brand of sprayer produced. The LANDA's are by far the most dependable and powerful sprayers of all.

Thank you again, for your contribution in helping clean up Exxon's Spill.

Sincerely,

GORDON THIELVOLDT  
Equipment Superintendent  
Exxon Company, U.S.A.
